For

dramatic improvement in wrinkles, scars, tone & texture with little-to-no downtime.

Dramatically improve wrinkles, scars & sun-damaged skin with ProFractional

What is ProFractional?

ProFractional is a quick and comfortable laser procedure with little to no downtime, used for improving the overall appearance of your skin. ProFractional uses a laser microbeam to treat thousands of pinpoint areas of your skin. And because only a fraction of the skin is directly treated with the laser, healing time is quick and downtime is short.

What conditions can be treated with ProFractional?

ProFractional can be used to improve a wide variety of skin conditions, but is used most for:

- Wrinkles and fine lines
- Post-traumatic scars
- Acne scars
- Age spots
- Sun spots
- Freckles
- Aging and sun-damaged skin

How does the ProFractional laser work?

ProFractional uses laser energy to create thousands of microscopic channels in the skin which are surrounded by areas of healthy, untreated skin. The zones of untreated skin invigorate the body's natural healing process, and the treated areas stimulate production of new collagen, plumping up the skin and smoothing out wrinkles, lines, scars and other irregularities.

Who should consider a ProFractional treatment?

If you are looking for younger looking skin, or to improve scars, wrinkles, or sun damage in a comfortable treatment with a fast recovery, then you may be an ideal candidate for ProFractional. Ask your physician if ProFractional is right for you.

Patient Testimonials

"My face feels revived, and my friends have noticed a fresher look! The freckles and brown spots are gone, and my skin looks and feels younger".

- Kristina C., Cupertino, CA

"First time in my life I am comfortable putting my hair back".

- Annette C., Boca Raton, FL

"The ProFractional treatment has greatly reduced my acne scars that have been bothering me for years. I feel a lot more confident about my appearance now".

- Paul K, Dallas, TX

"The treatment was very comfortable and I was able to resume my normal activities the next day".

- Bill R. Jr., Chicago, IL

"My skin feels smoother, softer, and has a healthier luster. I am very pleased with the result."

- Sue T., McFarland, WI

What areas can be treated?

Most skin areas can be treated. Popular areas are the face, neck, chest and hands. You should discuss your needs with your physician.

What is a ProFractional procedure like?

ProFractional is a fast, comfortable procedure done in your physician's office. The procedure normally takes 15 - 30 minutes depending on the condition and the size of the area treated. A numbing cream may be applied in advance to aid in comfort during the procedure.

How many ProFractional treatments will I need?

ProFractional is typically done in a series of 1 - 4 treatments, spaced 3 - 6 weeks apart, depending on your needs. Your physician will personalize a treatment plan based on the level of improvement you desire. Your physician may also combine ProFractional with a MicroLaserPeel or other popular aesthetic procedures to further enhance your treatment results.

What should I expect after treatment?

Immediately following the procedure you may experience a mild redness, resembling a light sunburn sensation. Complete healing takes only about 1 - 3 days and most patients can get back to work and apply makeup within 1 - 2 days after the treatment.

What special after-treatment care will I need?

It is important to follow your physician's instructions which may include some skin care products and instructions on how to use them. Your skin will be more sensitive to ultra-violet light after the procedure, so you must avoid direct sun exposure until fully healed. You should always use some level of sun protection to avoid sun damage and premature aging of your skin.
